04

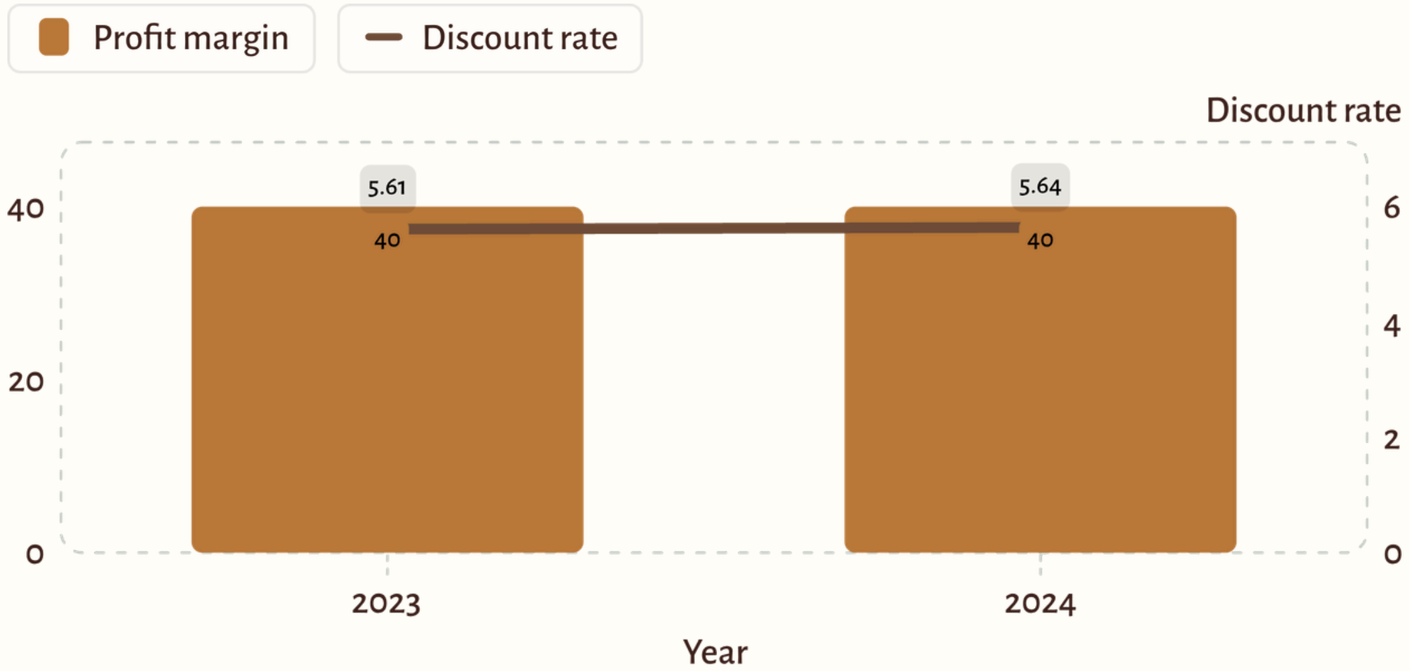

Develop

Interactive dashboard development

Dashboard combines monthly revenue trends, country-level performance, product-category profitability, and interactive country/category slicers.

CURRENT DASHBOARD VIEW

Profitability Is Stable in the Current View

Profit margin is unchanged while discount rate moves only slightly.

KEY TAKEAWAY

40.00% → 40.00%

The current dashboard does not confirm a sustained year-over-year decline in profit margin.

COUNTRY-LEVEL MARGINS

39.97%–40.02%

NAMED CATEGORIES

Dark ≈ 40.03%

Praline ≈ 39.98%

The 0.03 percentage-point discount-rate increase alone is not sufficient evidence to identify discounting as the cause.

CUSTOMER VALUE

Loyalty Members Contribute Similar Overall Value

LOYALTY MEMBERS

12.8M

Revenue

Profit ≈ 5.1M

Average order value 25.4

NON-LOYALTY MEMBERS

12.7M

Revenue

Profit ≈ 5.1M

Average order value 25.5

Loyalty members contribute slightly more revenue, but current results do not show a clear profit or average-order-value advantage.

RECOMMENDED NEXT MOVES

Validate the Trend Before Changing Strategy

Protect profitability by following the evidence.

01

Validate monthly performance

Compare revenue, profit, and profit margin month by month across 2023 and 2024 using a properly sorted monthly date axis.

02

Investigate product-level economics

Compare selling price, unit cost, discounts, and product mix by product and store.

03

Run measurable loyalty experiments

Test repeat-purchase or basket-building offers and evaluate incremental profit generated.

Validate the trend, identify the underlying drivers, and test targeted actions before making broad pricing or loyalty changes.
